## FEATURES

### >WORKING TEMPERATURE RANGE: -30 to +40°C

Our dome tent has two-layer of cover fabric and insulation liner. It is suitable for living in various weather conditions from 40°C to minus 10°C. It will be perfectly fitted in colder or hotter weather with the optional floor heating, air conditioning, fireplace, or other configurations.

### >WIND LOAD: 80-120km/h

The wind resistance of the tent depends on the connection method of the base. Our glamping dome tent has a solid foundation and can withstand level 12 typhoons, with a snow load of 0.30kN/m.

### >SNOW LOAD: 75kg/m<sup>2</sup>

The total static weight that can be supported over the entire dome is usually greater than any normal snow load it will have to support, as snow does not easily accumulate on a round roof. If the snow on the dome reaches 15cm, you should remove it with a broom or similar tool in order to prevent damage to the dome cover.

### >LIFE SPAN: Frames 15+ years, covering fabric 8-10 years

The lifespan of a tent mainly depends on the performance of the cover tarpaulin, which is generally 8-10 years of life. Our cover fabric is tear-resistant, durable, waterproof, fire retardant, mold-proof, and anti-corrosion.

### > 100% WATERPROOF; FLAME RETARDANT TO DIN4102 B1, M2, CFM; UV RESISTANT, TEAR-RESISTANT, SELF-CLEANING ABILITY, ETC.

All the materials of our domes have passed the environmental testing of China.

\* We will provide detailed installation guides, user manuals and videos, etc.

\* The Glamping Dome Tent comes with a one-year warranty from the original purchase date that covers defects in materials and workmanship but excludes damage from misuse, wear and tear, or environmental exposure.

# SIZES OF DOMES

We can produce geodesic dome tents from **diameters 3m to 10m** or even larger. Below we only list the most popular **5m-8m glamping dome** tents information. If you need other sizes of our dome tents, and not only used for glamping but also other purposes such as yoga, events, etc., please contact us directly.
